INTERNSHIP PRESENTATION

# PROMPT ENGINEERING AND GENERATIVE AI

Internship Project & Learning Outcomes

Student: Shashank Raj

Enrollment No.: 25SCS1003001227

Program & Semester: B.Tech CSE • Batch 2025–29 • 2CSE\_14

Organization: InAmigos Foundation

**2026–27**

# Internship Overview

01

1

## Core Focus

Practical learning in prompt engineering and Generative AI through structured activities.

2

## Learning Approach

Create → test → observe → compare → refine  
→ document.

3

## Practical Context

AI-assisted planning, learning, communication, decision-making, interviews and project organization.

- Four supplied activities formed the internship scope: Prompt Creation, Prompt Improvement, Prompt Role-Play and Prompt Workflow.
- Central insight: clearer instructions produce more relevant, structured and actionable AI responses.
- Responsible AI use emphasized verification, independent thinking and avoiding blind copying.

# Organization & Internship Context

02

## InAmigos Foundation

The report places the internship in the context of an educational and skill-development programme associated with InAmigos Foundation.

## Nature of the Work

The supplied activities emphasize practical AI literacy, experimentation, comparison of approaches and documentation of learning.

- The internship focused on prompt-engineering skills rather than development of a production AI model.
- Activities applied Generative AI to education, planning, communication, career preparation, decision-making and project organization.
- The report deliberately avoids unsupported statutory or institutional claims about the organization.

# Problem Statement & Objectives

03

## Problem Statement

Vague AI requests can produce technically reasonable answers that do not match the user's actual purpose. The internship explored how structure changes response quality.

- Understand how prompt wording affects relevance, quality and usefulness.
- Construct prompts using role, context, objective, audience, constraints, examples and output format.
- Compare basic and improved prompts and identify the techniques responsible for better outputs.
- Study role assignment and its effect on tone, priorities and decision-making.
- Build connected multi-step prompt workflows.
- Develop responsible AI-use habits, including verification and institutional compliance.

# Project Scope & Major Tasks

04

1

## Prompt Creation

10 prompts covering planning, learning, problem-solving, decision-making, summarization, ideas, writing, critical thinking, interviews and goal-setting.

2

## Prompt Improvement

5 basic prompts refined by adding context, audience, constraints, structure, measurable tasks and evaluation.

3

## Prompt Role-Play

5 professional roles: Teacher, HR Professional, Event Planner, Career Advisor and Project Manager.

4

## Prompt Workflow

4 connected stages for Software Developer interview preparation.

# Methodology & System Architecture

05

- Experiment-and-refine methodology: each activity began with a practical goal, followed by prompt construction, AI testing, observation, comparison and documentation.
- The same cycle was applied across individual prompts, role-based prompts and connected workflows.
- Evaluation focused on relevance, clarity, completeness, structure and usefulness.

# Task 1 — Prompt Creation

06

| Area              | Example                     | Main Technique                   |
|-------------------|-----------------------------|----------------------------------|
| Planning          | Study schedule              | Context + constraints + format   |
| Learning          | Embeddings in Generative AI | Role + simple language + analogy |
| Problem-solving   | Aptitude problem            | Step-by-step + verification      |
| Decision-making   | ₹3,000 choice               | Criteria + scoring               |
| Summarization     | AI in everyday life         | Word limit + structure           |
| Idea generation   | Technology projects         | Constraints + ranking            |
| Writing           | AI-use paragraph            | Audience + tone + word limit     |
| Critical thinking | AI in academic assignments  | Pros + cons + conclusion         |
| Interview         | Internship mock interview   | Role + interaction rules         |
| Goal-setting      | 30-day Java plan            | Time limit + stages              |

# Task 2 — Prompt Improvement

07

| Area               | Basic Prompt                        | Improvement Technique                                     |
|--------------------|-------------------------------------|-----------------------------------------------------------|
| Learning a concept | “Explain machine learning.”         | Audience + structure + constraints + examples             |
| Study planning     | “Make a study plan for my exams.”   | Context + time constraints + priorities + format          |
| Summarization      | “Summarize Generative AI.”          | Purpose + word limit + required content + tone            |
| Programming skills | “How can I improve my programming?” | Specific goal + progression + measurable tasks + fallback |
| Decision-making    | “Which skill should I learn first?” | Context + evaluation criteria + scoring + recommendation  |

## Overall Finding

Improved prompts were more immediately usable, consistent and aligned with the intended purpose.

## Task 3 — Prompt Role-Play

08

| Role            | Tone / Focus                           | Response Style                                        |
|-----------------|----------------------------------------|-------------------------------------------------------|
| Teacher         | Educational; understanding concepts    | Explanations, examples, questions                     |
| HR Professional | Professional; employability & behavior | Interview questions, sample answers, HR reasoning     |
| Event Planner   | Practical; execution & logistics       | Schedule, resources, engagement, risks                |
| Career Advisor  | Motivational; long-term development    | Roadmap, milestones, measurable outcomes              |
| Project Manager | Structured; delivery & accountability  | Scope, roles, deadlines, dependencies, risks, testing |

- Strongest example in the report: Project Manager, because the role naturally supports planning, task allocation, risk management, deadlines, testing and accountability.
- Key finding: role + context + clear instructions produces a more focused result than a broad request.

# Task 5 — Prompt Workflow

09

1

## Understand the Job Role

Identify technical skills, soft skills, responsibilities and preparation topics.

2

## Generate Interview Questions

Create 8 technical, 4 HR/behavioural and 3 problem-solving questions.

3

## Practice & Improve Answers

Ask one at a time; score answers on five criteria and provide targeted feedback.

4

## Final Preparation Plan

Turn role analysis and feedback into a seven-day plan and interview-day checklist.

# Technologies & Techniques

10

1

## Generative AI / AI tool

Creation, testing, refinement, comparison, explanation, planning and mock-interview activities.

2

## Microsoft Word

Preparation and organization of task documents and the final internship report.

3

## Prompt-engineering techniques

Role assignment, context, constraints, output formats, examples, evaluation criteria, interaction and verification.

4

## Tables & structured formats

Comparison of responses, schedules, decision matrices, roadmaps, checklists and workflow stages.

# Learning Outcomes & Key Findings

- Improved ability to write clear, specific and goal-oriented prompts.
- Better understanding of how audience, context, constraints and output format influence AI responses.
- Ability to compare vague and structured prompts and explain why their outputs differ.
- Understanding of role-based prompting and how professional perspectives change priorities.
- Ability to design connected prompt workflows rather than treating AI as only a one-question/one-answer tool.
- Improved planning, communication, interview preparation and project-organization skills.
- Greater awareness of verification, independent thinking, responsible AI use and academic integrity.

## Key Takeaway

“AI output becomes more useful when prompts provide clear role, context, objectives, constraints and evaluation.”

# Challenges & Responsible AI Practice

12

- Distinguishing useful AI output from generic or poorly aligned responses.
- Refining prompts when important context, constraints or evaluation criteria are missing.
- Keeping answers aligned with audience, purpose and required format.
- Connecting multiple prompt stages without losing continuity.
- Verifying AI-generated content and avoiding blind copying.

## Responsible Use

The internship emphasized verification, independent thinking, following institutional policies and using AI as an assistant rather than a substitute for judgment.

# Overall Internship Outcome

13

## What I Completed

- 10 prompt-creation examples
- 5 prompt-improvement comparisons
- 5 professional role-play perspectives
- 1 four-step interview-preparation workflow
- Structured documentation of findings

## What I Gained

- Prompt-design skills
- Analytical comparison skills
- Practical Generative AI literacy
- Planning and communication skills
- Interview-preparation skills
- Responsible AI-use habits

**The internship converted prompt engineering from a theoretical concept into a repeatable practical skill.**

# Internship Recognition & Supporting Documents

14

- Offer Letter
- Certificate of Internship Completion
- Certificate of Best Intern
- Additional Certificate of Internship
- Certificate of Appreciation

INTERNSHIP COMPLETION CERTIFICATE

Supporting documents are listed in the internship report; the certificate page is shown here as a visual reference.

# References

15

- 1. InAmigos Foundation — internship-related certificates and official documentation provided to the student.
- 2. Internship Report Format — School of Computer Science and Engineering, IILM University, Greater Noida, U.P.
- 3. Internship learning materials, research notes, analytical observations and AI-assisted work prepared during the Prompt Engineering and Generative AI internship.

## Source Basis

This presentation is adapted from Shreyas Yadav's supplied presentation structure and rewritten using Shashank Raj's supplied internship report.

# THANK YOU

PROMPT ENGINEERING AND GENERATIVE AI
